- 3 -Preliminary Remark

For the midterm-assessment of the low-cost toilet project of Society for Equitable Voluntary Actions (SEVA)/Vikas Kendra the author proposed - due to various reasons the month of July, 1993, a time, when monsoon in Bengal reaches its peak.

Despite the adverse weather the programme of the review could be carried out as per schedule.

For the numerous field trips in Atghara and the neighbouring villages staff members of Vikas Kendra has lent me all the support and co-operation necessary, For their assistance I am most grateful.

Herrsching/Germany, August 1993

Hans Escher

LIBRAPY, INTERIATIONAL REFERENCE CRANE FOR A MATER SUPPLY A. C. B. MATER SUPPLY FOR LUISTON STATE OF 14,1442 IGAN 11133 LO: 822 INWE93 1. Objectives and Approach

The purpose of this review was to avail the implementing NGO a feedback from an outsider while the project was still executed. The review happened to be undertaken, after more than half of the toilets had already been completed. At that time construction work had, as foreseen in the planning, stopped to a large extent, as due to the monsoon many villages were inaccessible. So this break, which VK-staff had anyway earmarked for a review, luckily coincided with the reviewer's visit to Atghara. It was hoped that an outsider would bring over fresh inputs and inspirations for the remaining part of the project and possible extensions of it.

In the planning of his stay the reviewer saw to it that he would get as much exposure to the "grassroot reality" as possible. This implied that on all days besides the days of arrival and departure trips to various villages were made. There the reviewer could not only get a look at toilets in various stages of completion, but could also intensively talk with beneficiaries and contact persons from the village organizations - the incharges for the toilet project in their areas.

As Vikas Kendra had set up a very efficient monitoring system, data about the project were readily available. Regarding the _quantitative_aspects_the_implementation_of_the_project_has_been______. fully according_ to plan. As the exchange rate developed other than calculated in the project application to BMZ, there are even funds left for construction of approximately 100 additional toilets. (At the beginning of August 1993 BMZ gave permission to use the funds accordingly.)

Due to the limited time available a systematic questionnaire survey was found to be beyond the reviewer's capacity. A crosscheck of the selection of beneficiaries was therefore not attempted. So the evaluation of the target group analysis relies to a great extent on a scrutiny of the questionnaire survey which had been done by Vikas Kendra.

Regarding design and technical execution of the toilets the reviewer incorporated the assessment of two representatives of Central Building Research Institute (CBRI), with which Vikas Kendra is continuously in contact. The reviewer had the opportunity to interview the representatives on 15th July 1993 at Vikas Kendra. A survey about the quantitative aspects was supplied by Vikas Kendra at the beginning of the stay in Atghara. So during his field trips the reviewer could concentrate on taking a look at the toilets and on interviewing beneficiaries and village organization members. As the technical aspects had been covered by CBRI, the reviewer could focus on the socio-cultural aspects of the project. Here one of his chief interests was to gauge the impact of awareness building measures. In this regard a list detailing awareness building events which had been carried out in the framework of the project had been drawn up by Vikas Kendra.

In order to become aware of possible diverging perceptions the preliminary results of the review were presented at the final meeting with the core team/low-cost toilet task force of Vikas Kendra. There Vikas Kendra accepted the basic findings of the review. The exchange with Vikas Kendra about possible modifications in planning and implementation of the project will continue after completion of this report.

16th July 1993	372 toilets are fully completed	
		For the reviewer one of the strong points of the project is the
		highly motivated team of VK-staff. They are not only able of
		motivating themselves. Also the responsible persons of the

- 7 -

- 8 -

village organizations were found to be very enthusiastic and committed. Through them true "grassroot" activities become possible. The basis for this is the close and trustful relationship between VK-staff and the village organizations.

The "material" and the "human" infrastructure assure a high

degree of effectiveness and efficiency in the project.

5. Target Group Analysis - Selection of Beneficiaries

5.1 Selection of Villages

The following villages were selected (see also appendix 3; one village organization per village unless otherwise stated). Criterion for the selection was the degree of activeness of the village organization and the intensity of their contact with VK.

- 9 -

Atghara (3) Uttar Simla Chandpur Dakshin Bena Dakshin Simla Dakshin Jangalpur Srirumpur Kirtipur Malayapur Mamudpur Purba Pingaleswar Naravanpur (2) Paschim Simla Naturia Pingaleswar Panji Uttar Jangalpur Purba Simla Bagan Atghara Ghoshpur 20 villages, 23 groups

Baduria block:

Deganga block

Beliakalı Chandalatı Nikrahatı Bunaratı 4 villages, 4 groups

Habra block

Vijaynagar Sımulpur 2 villages, 2 groups

Total

26 villages, 29 groups

New groups, where toilets have been sanctioned, but work has not yet started:

Solua Group, Village Sanhati, Habra block Kolsur Udayan Sangha, Kolsur, Habra block

5.2 Procedure of target group selection

The thrust of the project is to provide individual families with toilets which would be erected on their premises and become their private property. According to the planning the following groups should primarily benefit from the low-cost toilet project:

- Small and marginal farmers (marginal farmer: upto 6000 Ruples annual income for a family of five; size of agricultural land: upto one hectar [1 hectar = approx. 2.5 acres]; small farmer: upto 12.000 Ruples income for a family of five; size of agricultural land: upto 2 hectars)
- Scheduled Castes and Scheduled Tribes
- Other disadvantaged people such as handicapped persons, widows and old-aged persons

As a first step the village organizations proposed families for selection to VK. A surveyor from VK then visited the individual households in order to get a first impression about the social status of the family through various indicators such as

- does the family own a two-storeyed building?
- do one or more family members have permanent employment in the organized sector?

At a later stage a thorough socio-economic questionnaire survey was made (the form of the questionnaire, translated into English, is documented in appendix 2).

5.3 Evaluation of the questionnaire survey

A tabulation of the information contained in 750 questionnaires was done on 22nd July 1993 by VK-staff members (see appendix 4).

Coverage

Through being a member of one of 750 households a total of 4778 persons (1445 males, 1238 females and 2095 minors) gets access to toilets. The average household size amounts thus to 6.4.

- 11 -

Religious and Social Status

3671 persons (77%) are Muslims, while 1107 persons (23%) are Hindus. These ratios are approximately proportionate with the overall population shares of both communities in the area.

Of the benefitting Hindus 814 persons (76% of the community and 17% of the total of 4778) belong to Scheduled Castes and 16 persons belong to the Scheduled Tribes category. (According to the 1991 census the share of Scheduled Castés in West Bengal is 24%. In the project area the share of Scheduled Tribe population is negligible.)

Income

Of the 750 families 268 (36%) had an annual income of less than 6400 Ruples, The income of 378 families (50%) ranged between 6400 and 10.000 Ruples. 104 families (14%) disposed of an income of more than 10.000 Ruples. (Unfortunately it was not enquired, by how much exactly their income exceeded the sum of 10.000 Ruples.)

Occupation

485 households (65%) have their mainstay in farming. 101 households (13%) stated as their main occupation "daily labour". The remaining 164 households (22%) have employment in other fields.

Land Ownership

101 households (14%) can be regarded as landless, as they rated themselves as daily labourers. Judging from the statements about land sizes the share of landless agricultural labourers may be even higher: 312 families (42%) own less than 0.33 acres of land, 363 (48%) from 0.33 acres to 2.5 acres and 75 (10%) between 2,5 and 5 acres. Families owning more than 5 acres were not selected. The marginal land sizes include also the farmstead area, which may explain why there is no category of "landless families" in the tabulation of beneficiaries according to land ownership.

5.4 Special features of target group selection

On the whole 10 handicapped persons were selected for participation.

In Atghara Mahila Mandala, the village women's organization was alloted a quota of eight toilets. The corresponding number of families in the Boidupara para (neighbourhood) of Atghara was duely selected.

VK sanctioned on request a quota of 10 toilets for two panchayats (village councils), which will allot them to private households.

For the following public institutions toilets were sanctioned on request:

- hath (local market) Atghara: 1 toilet
- Public Library Kolsur: 1 toilet
- mosque Uttar Sımla: 1 toilet
- 2 mosques Bunarati: 1 toilet each

5.5 Assessment

Taking into account the average family size of 6.4 and the fact that no household owns more than 5 acres land one can assume that the overwhelming majority of the beneficiaries, i.e. at least the 86% whose annual income is below 10.000 Ruples, lives below the poverty line. In addition the fact that 65% of the beneficiary families live on agriculture and that 13% belong to the daily labour category indicates that an overwhelming majority of the participants belong to the category of small and marginal farmers.

Equally the categories of Scheduled Castes/Scheduled Tribes and disadvantaged persons are well represented in the group of beneficiaries.

The overall correspondence between the actual target group selection and the criteria given in the planning is high.

Some applicants' farmstead size was to small to guarantee the minimum distance between toilet and water source. Their applications could not be considered. As these applicants might belong to the "poorest of the poor", ideas should be developed about possible solutions for them. These solutions can possibly only be found on a case-to-case basis.

6. Technical Aspects - Toilet Design and Execution

6.1 Selection of Design

The design of the toilet was selected in collaboration with the Central Building Research Institute (CBRI). The model of two pit hand flushed low-cost toilet was chosen. According to CBRI this model is universally accepted for rural areas and is also employed by the reputed Sulabh Movement and international agencies such as UNICEF.

CBRI is a Government of India (GOI) research institute, which has its headquarters at Roorkee/Uttar Pradesh. It is under the GOI apex research body of CSIR (Centre for Science and Industrial Research). Working areas of CBRI include the development of lowcost building materials and technology.

Vikas Kendra is in close contact with Mr. Bose, scientist-inchief, and Mr. Dasgupta, in-charge civil engineering, of the Calcutta branch of CBRI, amongst whose tasks are development, construction and extension in the building sector.

The reviewer had the opportunity to interview Messrs. Bose and Dasgupta on 15th July 1993 at Atghara. He was very grateful that this meeting had been arranged by Vikas Kendra, as the technical aspects could thus be covered by specialists.

Several special features of the execution of the model at Vikas Kendra were discussed:

- Vikas Kendra uses fibre glass as material for the pan. It is of a reasonable cost, as it can be manufactured locally by small-scale companies. It is of light weight and experience so far has shown that it is durable. The experience with the coating has been so far very good. Toilets which had been built in 1987 with the same type of pan have so far shown no wear-off.
- The bottom of the pits remains uncemented. The standard material to fortify the pits is bricks. Earthen rings were found to be considerably less costly and were therefore applied by VK. These earthen rings are manufactured in West Bengal usually for the support of wells. As there is a good quality of clay available, the durability of the earthen rings is quite high.

- Originally it was proposed to use recycled materials from drums for the doors of the toilet. As used material was not so popular with the beneficiaries, new sheets, which are more shining and which look more attractive, had to be taken.
- The CBRI-representatives lauded the "package approach" of Vikas Kendra, i.e. the fact that the beneficiaries receive a 100%-complete toilet in exchange for payment of a lump sum of 500 Rupies and procurement of local sand.

They mentioned that Government of India agencies had built at least 10 toilets in Baduria block (where also Atghara is situated) upto the plinth level with the expectation that the superstructure would be done by the users themselves. These toilets have not been completed and lie still idle.

The CBRI-representatives were of the opinion that the toilets constructed by Vikas Kendra cost less than those executed by government agencies such as Public Works Department (PWD). This is due to the close supervision of Vikas Kendra and due to their highly motivated team, which is very keen for possible savings.

6.2 Assessment of Execution

- According to the CBRI-representatives the construction quality of the toilets is according to the standard required.

Beneficiaries could not be interviewed regarding their experiences with the toilets, as these were released for use only after CBRI had given its approval on 15th July 1993.

The solid superstructure of the toilets was generally appreciated by the beneficiaries.

The satisfaction of CBRI with the work of Vikas Kendra is also reflected in the fact that CBRI wants to continue collaboration with this organization.

7. Socio-Cultural Aspects - Awareness Building

7.1 Introduction - Background

It is generally agreed that in the past technical and quantitative aspects in sanitation projects have often received more-than-sufficient attention, while socio-cultural aspects have rather been neglected. This has lead to a low degree of acceptance among the target population. As a consequence sustainability was also severely affected. - 15 -

On this backdrop the reviewer was particularly keen to assess the motivation of the participants as well as their motives for participating.

Due to previous efforts of VK the starting position for a successful propagation of toilets in the project area is favourable. According to VK-staff members, toilets are not, unlike at the outset of its work in 1985, something totally strange. At that time 15 toilets had been constructed in the framework of a pilot project. Then beneficiaries had to be cajoled into accepting sanitation. A second project under which 300 toilets were constructed in 1989 showed already a better response. The fact that these toilets were accessible and could be seen functioning dispelled many doubts. So by example the popular belief that nuisance through smell would increase could be refuted easily.

First reports from VK from April 1993 had already shown that the demand for toilets was higher than the number of toilets budgeted for.

For the reviewer this presented an amazing phenomenon, as studies he had come across so far, had rather stressed the difficulty of transition from traditional systems of defecation to the usage of toilets. So the assessment of the motives of the beneficiaries constituted one of the key questions of his interviews.

7.2 Findings

7.2.1 Quantitative Aspects

Regarding the numbers of awareness building events Vikas Kendra supplied the reviewer with a summary (as of 8th July 1993) in tabular form (see appendix 1). From this summary it can be seen that all the villages covered by the project were visited at least once by VK-staff. The 37 meetings in the villages, which had been organized by the village organizations and which were addressed by VK-staff, were attended by more than 800 persons (including multiple attendances).

The low-cost toilet task force of VK itself had met 16 times. In order to interest the village organizations two meetings with their leaders (attendance: ca. 60 persons each) had taken place at an early stage of the project (19th April and 6th May 1993). In these meetings it was announced that each village organization should nominate a contact person for the low-cost toilet project. In order to inform and motivate these contact persons meetings were held on 13th May 1993, 9th June 1993, and 23rd June 1993. A motivation training, which was attended by 72 persons, was held.

7.2.2 Qualitative Aspects

As already mentioned, the interest to participate in the low-cost toilet project was unexpectedly high. The demand for toilets could not be fully satisfied. Therefore the necessity to "advertise" for the project did not arise.

In the course of his tours to the villages the reviewer asked both contact persons of village organizations and beneficiaries for explanations for this strong interest.

The following motives were most often mentioned:

- Life becomes much more convenient, once the toilets are on one's own property and thus within easy reach. Previously the family had to walk some distance to reach the "toilet ground", if necessary also during adverse weather in the monsoon season. Due to the preconceived notions of shame the women would to the toilet only in the dark. Because of this they were compelled to limit their intake of fluid and food during the day. Now life has become easier for them.
- the highly subsidized price of 500 Rupies. Moreover the contribution demanded of the beneficiaries in the form of labour was manageable. All organizational matters were taken care of by Vikas Kendra and the village organizations. In the project area "kutcha" structures, i.e. buildings made
 - of clay with paddy straw as roof, are still very common. "Pucca" structures, buildings made of bricks with tiles as roof cover, are the symbol of prosperity and indicate a high social status. Several respondents praised the "solid" or "permanent" structure of the toilets and expressed their pride about owning such a type of building.

The linkage between toilet usage and the health situation of the area was rarely mentioned by the respondents. Through interviews with representatives of the village organizations the reviewer got the impression that the awareness building events focussed mainly on

- organizational aspects of implementation, and
- cleaning and maintenance of the toilets.

The latter point was mentioned by the majority of the respondents. The reviewer had the impression that in the course of various meetings the topic of cleaning and maintenance had been communicated in a sufficient way

An indicator that the new toilets will actually be used and maintained is the fact that the toilets from previous projects are still in use This could be ascertained by the reviewer, as he inspected some of these toilets.

8. Proposals and Recommendations

While the operational and technical parts of the project have been dealt with to the full satisfaction of the reviewer, the main recommendation for the final project phase is to focus more on awareness building measures.

As the beneficiaries gain through the project an asset of considerable value, there should be a certain preparedness on their side to participate in awareness building measures.

These awareness building measures should have two objectives:

- a) demonstrating the impact of toilet use on the general health situation
- b) increasing the awareness level on hygiene in general.

As result of measures related to objective "a" the beneficiaries should become aware about the impact of the traditional defecation practices on the incidence of infectious deseases.

The propagation of low-cost toilets is a welcome occasion for increased efforts in the field of general hygiene education. If one takes into account the supergoal of the project - reduction of the incidence of infectious deseases $-\frac{1}{2}$ it is clear that the level of hygiene in general has to be raised. Possible topics under this heading could for instance be

- washing of hands, especially before meals
- handling of food
- how to impart hygiene education to children
- disposal of solid waste.

As the reviewer had the impression that so far only one person per family participated in awareness building events (while the average beneficiary family consists of six persons), it is suggested to reach out at least to all the adult members of a family. In case it is difficult to get a response from women, separate events for them, organized by female staff of VK, should be considered.

A precondition for increased efforts in conscientization would be to initiate a "training of the trainers", i.e. of VK-staff, in general hygiene. For this purpose VK could make use of its contacts to All India Institute of Hygiene and Public Health (AIIHPH), Calcutta and International Training Network (ITN). This institution is part of the sanitary engineering department of AIIHPH and is sponsored by the Ministry of Rural Development, New Delhi, and by the Overseas Development Administration (ODA) of UK. Other Indian NGOs, which offer training in this sector, may be considered as well.

9. Working Summary

The low-cost toilet project of Vikas Kendra in Atghara/West Bengal was visited by the reviewer from 12th to 17th July 1993. At this stage 970 beneficiaries had been selected and 372 of the overall 1000 toilets had been fully completed. Through awareness building measures from April to June 1993 more than 800 persons had been reached directly (including multiple attendances). The project is implemented in 26 villages with the help of 29 local organizations.

Through an excellent monitoring system, which has been installed at the Vikas Kendra project centre in Atghara, up-to-date information about the progress in construction of the widely scattered toilets is permanently available. Motivation and commitment of VK-staff and members of the village organizations were found to be at a high level. The co-operation with the village organizations is very close. Through them an intensive participation of the target group is assured.

The selection of beneficiaries was to a very large extent done according to the criteria laid down in the project planning.

According to representatives from Central Building Research Institute (CBRI) the construction of the toilets was executed in a professional way.

.

Awareness building activities could be intensified so that a greater understanding about the relevance of toilet use for public health can be reached and knowledge about hygiene in general becomes more widespread.

- 19 -

Overall Vikas Kendra has reached a high level of competence in the field of sanitation. The reviewer strongly recommends Vikas Kendra as executing agency also for future sanitation projects. The reviewer found a very strong motivation among VK-staff to continue work in this field.
